Tote Bag mockups
Midjourney Prompt

Midjourney Prompt

blank canvas tote bag photoshoot mockup, front facing, facing front, boho background, full photo shot on Agfa Vista 200 --s 750 --style raw -

generate a professional mockup for a blank and absolutely white tote bag placed on a black woman hands, tote bag in focus and front view, please do not put any text or images on the tote bag flat surface, hyperrealistic photography --v 5.1 -

white tote bag, white background, frontview, mockup --ar 1:1 -

plain white tote bag mockup, Natural Tote Bag S&S Bags 42795, hanging from a chair --s 750 -

black canvas cotton tote bag, modern background, mockup, no images, no font -

tote bag mockup, flat background, smooth no shadow, photography, extra bright light --ar 4:3 --upbeta --v 5.1 -

generate a professional mockup for a blank and absolutely white tote bag placed on a table, tote bag in focus and front view, please do not put any text or images on the tote bag flat surface, hyperrealistic photography --v 5.1 -

hand held tote bag mockup, in the style of subodh gupta, unprimed canvas, артур скижали-вейс, rounded, beige, flat --ar 23:39 --s 250 --v 5.1 --style raw -

Create a stunning close-up mockup featuring a beautiful woman carrying a cotton tote bag on her left shoulder while standing sideways to the camera. Focus the image on the bag itself, with the handles hanging over her shoulder rather than around her neck. Position the woman in a graceful and confident stance that highlights her elegance without distracting from the bag. Choose a clean and neutral background that enhances the natural appeal of the cotton tote bag. Use soft and diffused lighting to bring out the texture and color of the fabric, ensuring that every detail is visible and inviting. Adjust the angle to capture the bag from its most flattering perspective, showcasing its design elements and spaciousness. Apply subtle editing techniques to enhance the bag's features while maintaining a realistic look. The woman's attire and accessories should complement the bag's style, adding to the overall aesthetic of the mockup. This close-up mockup will captivate viewers, showcasing the beauty and versatility of the cotton tote bag in an elegant and enticing manner. –

blank tote bag mockup no designs focused on tote bag in front of bricks––v 5.1 –

MIDJOURNEY Guide

"MidJourney is a powerful artificial intelligence (AI) powered tool that transforms text into images. You enter a "prompt" (a descriptive string of words), and the AI language analyzes the text you enter and then outputs an image by diffusion.

What you get in return for the prompt you enter is a completely new product that never existed before.

Among other popular AI options (like Stable Diffusion, Dall-E 2, Crayon, NightCafe), what sets MidJourney apart is multiple algorithms (V3, V4) and custom parameters (quality, style, chaos). There is so much variety from a single idea it really allows you to achieve. Plus, you can create literally thousands of images per month on the Standard Plan.

If getting started is intimidating, don't stress, read this helpful MidJourney guide, and become a master!

MidJourney runs on Discord, a popular chat app. If you don't have an account yet, skip ahead and sign up for free. It may seem unappealing at first, but you'll get used to it!

Make sure you're signed in to Discord and accept the MidJourney Invitation. I highly recommend signing up for the $30/month Standard Plan after your trial (or typing /subscribe to Discord and following the link).

If you don't want all the clutter of a public channel while working, you can create your own Discord Server, invite MidJourney Bot, and do all your work in separate channels. You can create channels for #projects, #test, #help, and #images to keep things organized. However, your images and prompts will still be publicly available on the MidJourney website, but you can pay more for the Private mode where you can publish or unpublish images.

You can immediately switch to comfortable mode by typing /relax in Discord. I suggest you do all your work in relaxed mode, then switch to /fast mode only for a maximum boost or if you're really in a hurry. In /relax mode, the images are free, so you get endless renders!"
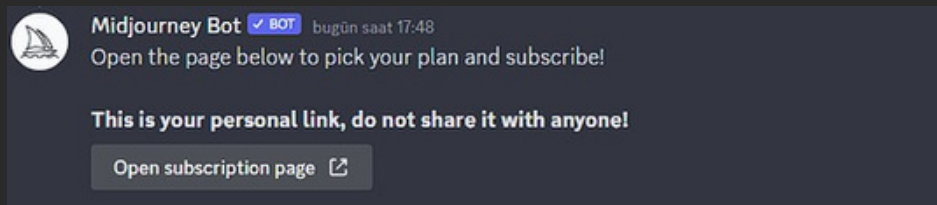

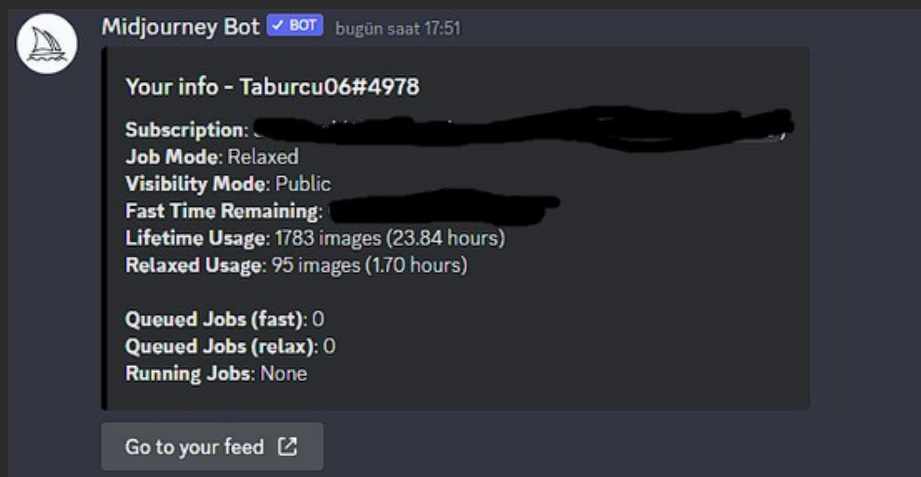

BEGINNER COMMANDS

/help >Entering this command displays a host of useful information to help you get started: links to GitBook, tips, and more.

/subscribe > Trial period is over, and you still want more? This command will send you a link that will take you to the MidJourney subscriptions page.

/info > Displays user information, pictures made, whether relax or fast mode is enabled, remaining GPU hours, items in progress, etc

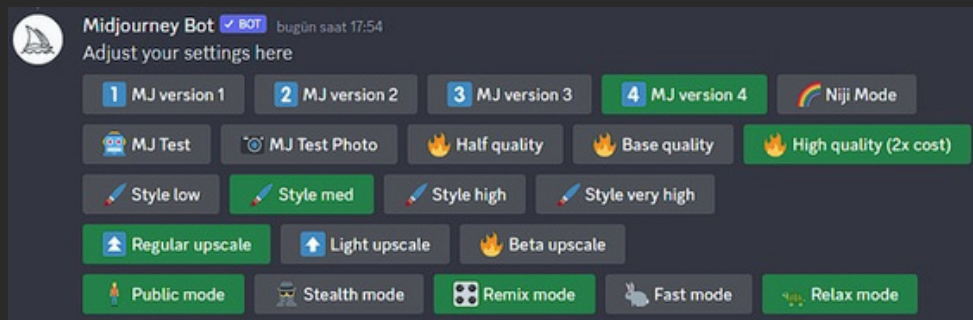

/fast > Fast mode, fast results but counts against your working hours, so be careful!

/relax > Slow mode renders slower but takes hours .

/ magine > Cl ck the master code to send a prompt, then "prompt:" and after that type your visual deas. This is the one we will use the most.

/settings > Set default settings such as version, style, quality, relaxation mode. The settings you make are global. You can also use parameters in prompts, such as ––version or ––quality, but then they only apply to a single promp

If you pay for a Pro subscription, entering this command will make all your work on the MidJourney website private, visible only to you.
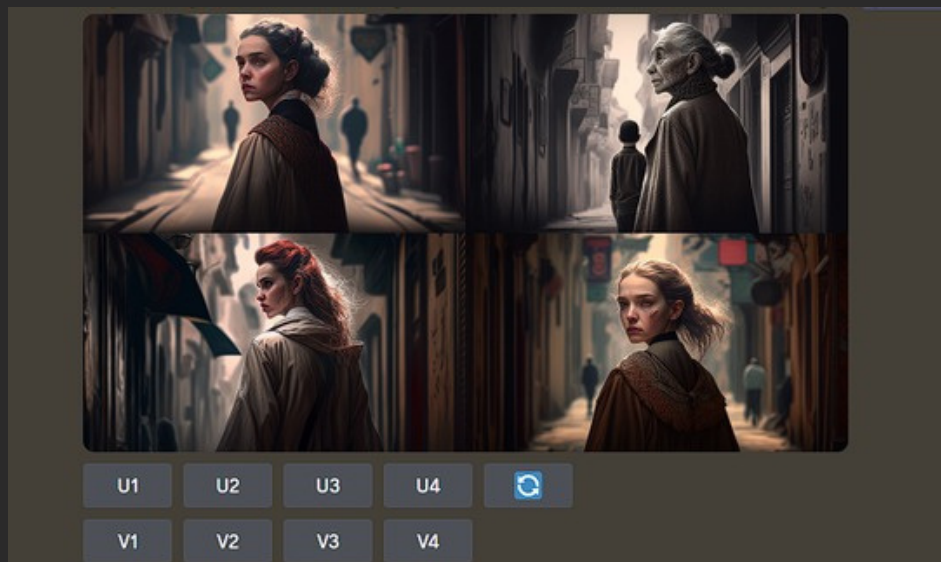

/public > If you are in Incognito Mode, you can turn it off with this command and make your work visible to everyone.
When you enter a prompt, the completed images are returned as messages in a grid. It reads like a book, with the numbers 1 and 2 on the top and the numbers 3 and 4 on the bottom. Then you can use various buttons to make variations or adjustments.
↻ > Returns the same prompt, but a new seed is used so all images are different.
V1 > Creates variations for the first image, and it will make 4 more images based on the selected image so they will look similar but different.
U1 > Raises the initial view and may change some of the view for better or worse, but that's where the later high–end options come into play.

PROMPT

A prompt is a sentence of text that MidJourney Bot interprets to create an image. MidJourney Bot is used to render words and phrases in a prompt. A well-crafted prompt can help create unique and exciting images

Example : / imagine prompt : a cute fluffy bunny grumpily working on her trip itinerary

STYLE

You can specify the types of stylistic effects you want to use in your prompts. It can be a technical style, an art medium, an architect, a painter, a photographer, an art movement, an aesthetic, a decade-old style, a mood, or even just some colors.

Example : / imagine prompt : a cute cartoon fluffy bunny grumpily working on her trip itinerary, by pixar

PARAMETER

Aspect Ratio

The --aspect or --ar parameter changes the aspect ratio of the generated image. An aspect ratio is the width-to-height ratio of an image. It is typically expressed as two numbers separated by a colon, such as 7:4 or 4:3.
Different MidJourney Version Models have different maximum aspect ratios.

	v 4c	v 4a & v 4b	v 3	test/testp	niji
Ratios	1:2 to 2:1	Only: 1:1, 2:3 or 3:2	such as 16:9 or 1920:1080	5:2 to 2:5	1:2 to 2:1

The --ar parameter will accept any aspect ratio from 1:1 (square) up to the maximum aspect ratio for each model.

prompt example : / magine prompt: cute dog art --ar 2:3

--ar 3:2

--ar 2:3

Chaos

The --chaos or --c parameter influences how varied the initial image grids are.

High --chaos values will produce more unusual and unexpected results and compositions.

Lower --chaos values have more reliable, repeatable results.

Low Chaos Values Using a low --chaos value, or not specifying a value, will produce initial image grids that are slightly varied each time a job is run.

Prompt example: /magikne prompt: pineapple penguin hybrid.

High Chaos Values Using a higher --chaos value will produce initial image gradients

that are more varied and unexpected each time a job is run.

Prompt example: /imagine prompt: pineapple penguin hybrid --c 50

Very High Chaos Values Using extremely high chaos values will produce initial

image grids that are varied and have unexpected compositions or artistic mediums

each time a job is run.

Prompt example: /imagine prompt: pineapple penguin hybrid --c 100

The No Parameter

TThe --no parameter will tell it to prevent anything you specify from being added to the AI-generated image.

prompt example : / imagine prompt: colorful ball --no red

You can review the usage of all other parameters from this link:
Midjourney Parameters

This product is for personal use. It cannot be cop ed and resold.

Please respect the effort put in. Otherwise, legal proceedings will be initiated!

THANK YOU!

I encourage you to write a review on the Etsy Product Page to support my small business. This way, other people will find this product and can produce great images like yours.

Thank you very much for your support! I wish you all the best of luck, health, and success in your life! Take care of yourself!

This guide will be updated from time to time to add the latest and greatest prompts, so be sure to check back once a month by downloading the product from the same link!
